2024

Rimac Seguros y Reaseguros

Generated 25-11-2024

About this report

PRI reporting is the largest global reporting project on responsible investment. It was developed with investors, for investors.

PRI signatories are required to report publicly on their responsible investment activities each year. In turn, they receive a number of outputs, including a public and private Transparency Report.

The public Transparency Reports, which are produced using signatories' reported information, provide accountability and support signatories to have internal discussions about their practices and to discuss these with their clients, beneficiaries, and other stakeholders.

This public Transparency Report is an export of the signatory's responses to the PRI Reporting Framework during the 2024 reporting period. It includes the signatory's responses to core indicators, as well as responses to plus indicators that the signatory has agreed to make public.

In response to signatory feedback, the PRI has not summarised signatories' responses – the information in this document is presented exactly as it was reported.

For each of the indicators in this document, all options selected by the signatory are presented, including links and qualitative responses. In some indicators, all applicable options are included for additional context.

Disclaimers

Legal Context

PRI recognises that the laws and regulations to which signatories are subject differ by jurisdiction. We do not seek or require any signatory to take an action that is not in compliance with applicable laws. All signatory responses should therefore be understood to be subject to and informed by the legal and regulatory context in which the signatory operates.

Responsible investment definitions

Within the PRI Reporting Framework Glossary, we provide definitions for key terms to guide reporting on responsible investment practices in the Reporting Framework. These definitions may differ from those used or proposed by other authorities and regulatory bodies due to evolving industry perspectives and changing legislative landscapes. Users of this report should be aware of these variations, as they may impact interpretations of the information provided.

Data accuracy

This document presents information reported directly by signatories in the 2024 reporting cycle. This information has not been audited by the PRI or any other party acting on its behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented. The PRI has taken reasonable action to ensure that data submitted by signatories in the reporting tool is reflected in their official PRI reports accurately. However, it is possible that small data inaccuracies and/or gaps remain, and the PRI shall not be responsible or liable for such inaccuracies and gaps.

Section 1. Our commitment

- Why does your organisation engage in responsible investment?
- What is your organisation's overall approach to responsible investment, and what major responsible investment commitment(s) have you made?

As one of the main insurance companies in the Peruvian market, we need to reflect a strong commitment to the social development of our environment in such a way that it becomes common practice to analyze investments not only from a perspective of returns but also of sustainable returns. This is because we recognize that our fiduciary duty involves acting in the best interests of our clients, policyholders, beneficiaries, and other stakeholders.

Specifically, because of our responsible investment policy and that of the selected funds, we seek to invest in socially responsible initiatives such as clean and renewable energy, for example. Additionally, we do not invest in sectors such as armaments, tobacco, casinos, and others since these are sectors that do not fit with our ESG principles. It is worth mentioning that Rimac Seguros has been a member of the BVL Sustainability Index since 2018, a signatory of the local PIR since 2017, and, of the UN PRI since 2022.

Rimac has committed investments for more than USD 55 million in renewable energy projects (hydroelectric plants, wind and solar projects, as well as water reuse) focused on countries such as Australia, Germany, France, the USA, Chile, Colombia, and Panama, among others. In addition, Rimac has committed investments for more than USD 30 million in impact investments, which deliver environmental and social benefits at scale. Also, we have approved lines with high social impact for more than USD 120 million.

Additionally, we have investments for more than USD 135 million in power generation companies which are in the process of changing their energy matrix, directing it towards non-conventional renewable energies, more efficient and cleaner for the environment with specific goals for 2024.

Rimac has real estate investments for more than USD 100 million that meet better environmental standards (LEED certification) and has projects under development for approximately USD 150 million under the same standards. LEED is a sustainable building certification system developed by the U.S. Green Building Council.

Section 2. Annual overview

- Discuss your organisation's progress during the reporting year on the responsible investment issue you consider most relevant or material to your organisation or its assets.
- Reflect on your performance with respect to your organisation's responsible investment objectives and targets during the reporting year. Details might include, for example, outlining your single most important achievement or describing your general progress on topics such as the following (where applicable):
 - refinement of ESG analysis and incorporation
 - stewardship activities with investees and/or with policymakers
 - collaborative engagements
 - attainment of responsible investment certifications and/or awards

During the reporting year, we implemented 2 high-impact initiatives: (i) We have started to calculate the carbon footprint of our investment portfolio, according to the PCAF methodology. At the close of the reporting year, the absolute carbon footprint and carbon footprint intensity of 32.5% of our AUM have been calculated. Likewise, we have established goals for the calculation of the carbon footprint of our foreign portfolio in order to develop metrics that allow us to continue with our sustainability objectives. (ii) We have incorporated ESG clauses in the contracts of the mandates that we maintain and open. In this way, we seek to reinforce the alignment of interests in relation to our Responsible Investment Policy.

Also, during the reporting year, we have maintained our commitment to sustainable investments, which has materialized through:

- ESG analysis of issuers that are already part of our portfolio, as well as those we are proposing as new investment lines. This is done through the elaboration of an ESG traffic light in which we categorize the entities on a scale of 1 to 5. This traffic light is placed in the initial layout of the Executive Summaries of our presentations.
- Participation in working groups of the Programa de Inversion Responsable (PIR), both for the analysis of financial issuers and for the elaboration of materiality indicators for the utility sector. It is worth mentioning that Rimac was the first insurer company to join the local PIR in 2017 and since that date, we have actively participated in the initiatives they promote.
- Continuous monitoring of the news and reports of our portfolio, so that we are clear about the physical risks and transition risks to which they are exposed.

Section 3. Next steps

- What specific steps has your organisation outlined to advance your commitment to responsible investment in the next two years?

From the Investment team, we have taken on the challenge of calculating the carbon footprint of our investment portfolio, and we have set the 2025 year as the target date for calculating the carbon footprint of our foreign portfolio.

During 2024 we have updated our Responsible Investment Policy, incorporating two new sections: (i) Responsible Management - Stewardship: which details how we will monitor the companies in which we invest, as well as seek to positively influence the Peruvian financial ecosystem to promote sound corporate governance, responsible management of environmental resources and respect for human and labor rights and customer relations; and (ii) Evaluation of results: Where it is indicated that we will annually evaluate the results of the sustainability indicators obtained from our investments through the calculation and monitoring of KPIs.

We have participated in working groups of the Programa de Inversion Responsable (PIR). Through this type of initiative, together with the other PIR partners, we seek to develop indicators that allow us to analyze the companies in which we invest in greater depth, providing us with access to key information in the area of sustainability.

The Programa de Inversión Responsable (PIR) seeks to articulate and empower key actors in the financial sector by promoting responsible investment policies and practices to contribute to the sustainable development of the country and the region, as they themselves state on their website: <https://pir.pe/>. In line with this, during the reporting year, we have participated in groups for the analysis of financial issuers and for the elaboration of materiality indicators for the utility sector.

Yes, for instance we have identified the transitions risks of the power generation companies and we have invested in companies which are in the process of changing their energy matrix, directing it towards non-conventional renewable energies, more efficient and cleaner for the environment with specific goals for 2024.

Does your organisation integrate climate-related risks and opportunities affecting your investments in its overall investment strategy, financial planning and (if relevant) products?

● (A) Yes, our overall investment strategy, financial planning and (if relevant) products integrate climate-related risks and opportunities

Describe how climate-related risks and opportunities have affected or are expected to affect your investment strategy, financial planning and (if relevant) products:

Through our Responsible Investment Policy, we have guidelines for identifying climate-related risks, which we seek to be clear about before we make a proposal for a new issuer for our portfolio.

Under this framework, our organization performs a detailed analysis of those investment proposals that generate or may generate controversies due to their environmental impact. According to our Policy, all controversies will be analyzed, documented, exposed and discussed in RIMAC's Investment Committee, who will approve the investment depending on its level of tolerance and/or exposure to it. In addition, there is a multidisciplinary team that addresses climate-related risks from various fronts, which is supported by the relevant information from a specialized area called "Monitoring Center" which provides updates, alerts and preventive communications of climatic events, with the objective to minimize the financial impact on the assets of our clients and consequently, the company.

- ☐ (B) Yes, using the One Earth Climate Model scenario
- ☐ (C) Yes, using the International Energy Agency (IEA) Net Zero scenario

Does your organisation have a process to identify, assess, and manage the climate-related risks (potentially) affecting your investments?

☒ **(A) Yes, we have a process to identify and assess climate-related risks**

(1) Describe your process

Through our Responsible Investment Policy, we have guidelines for identifying climate-related risks, which we seek to be clear about before we make a proposal for a new issuer for our portfolio. Additionally, during the reporting year we monitored the impact of climate-related risks by reviewing the impact of the El Niño Phenomenon on our entire investment portfolio, considering the forecasts of entities such as the Australian Government Bureau of Meteorology - BOM, the National Oceanic and Atmospheric Administration - NOAA and the National Study of the El Niño Phenomenon - ENFEN.

(2) Describe how this process is integrated into your overall risk management

When the probability of a risk related to climate change increases, what is done is to build a multidisciplinary team to address this risk from various angles and thus minimize its effect on the company's performance; the most recent case is the team that has been set up to address the possible El Niño Event of 23-24 related to preventive information and crisis response.
